

JS conditional statements

They are used to perform different actions based on different conditions

Types of conditional statements

1. If statement
2. If else statement
3. If else if statement

The if statement

It evaluates the content only if the expression is true.

Syntax

```
if(expression){  
    //content to be evaluated  
}
```

JavaScript if...else statement

It evaluates the expression whether the condition is true or false.

Syntax

```
if(expression){  
    //content to be evaluated if the condition is true  
}  
else{  
    //content to be evaluated if the condition is false  
}
```

JavaScript if...else if statement

it evaluates the content only if the expression is true from several expressions

syntax

```
if(expression1){  
    //content to be evaluated if expression1 is true
```

```
}  
  
else if(expression2){  
    //content to be evaluated if expression2 is true  
}  
  
else if(expression3){  
    //content to be evaluated if expression3 is true  
}  
  
.  
.  
  
else{  
    //content to be evaluated if no expression is true  
}
```
